FixItNow – Appliance Repair Booking Website

Index

Problem Statement

Your solution

Working (Method/Mind map)

Conclusion.

Note: Slides (excluding Thank-you and Introduction slide) should not be more than 4.

Slide 2 — Problem Statement

Many appliance repair services still rely on **manual booking systems** such as phone calls or physical visits.

This creates several problems:

- **Customers cannot easily schedule repair services**
- **Lack of transparency in repair pricing**
- **Difficult to track technician availability**
- **Time-consuming manual processes**

Because of these issues, customers often face delays and inconvenience.

To solve these problems, we developed a web-based appliance repair booking system called FixItNow.

The website allows users to:

- View appliance repair services
- Check transparent pricing
- View technician details and experience
- Book repair services online
- Get dynamic repair cost estimation

This system simplifies the booking process and improves user convenience.

Working (Method / Mind Map)

1

User visits the website homepage

2

User explores available services

- AC Repair
- Refrigerator Repair
- Washing Machine Repair
- Microwave Repair

3

User fills **booking form**

User checks pricing and technician details

4

5

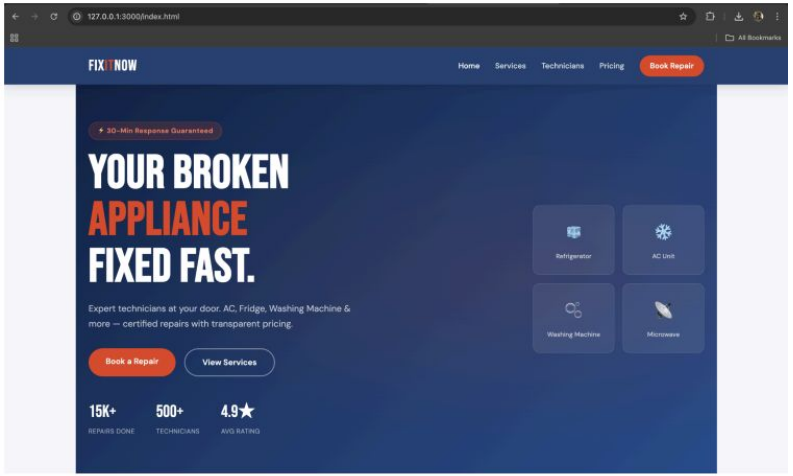
JS

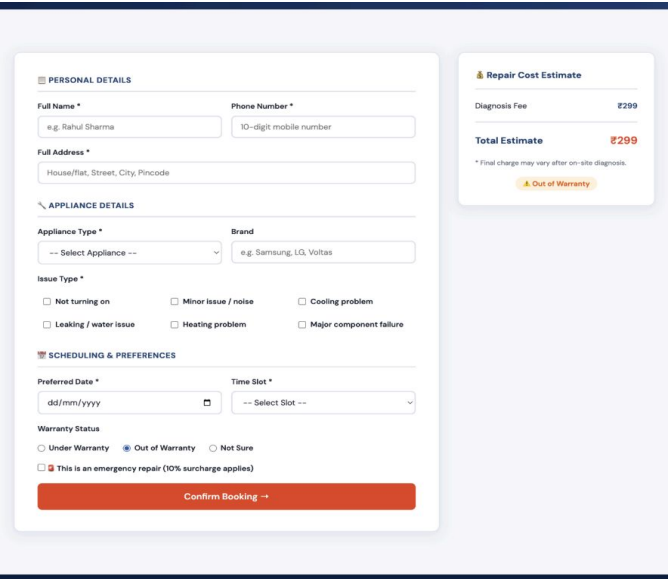
JavaScript validates the form and calculates the **repair cost estimate**

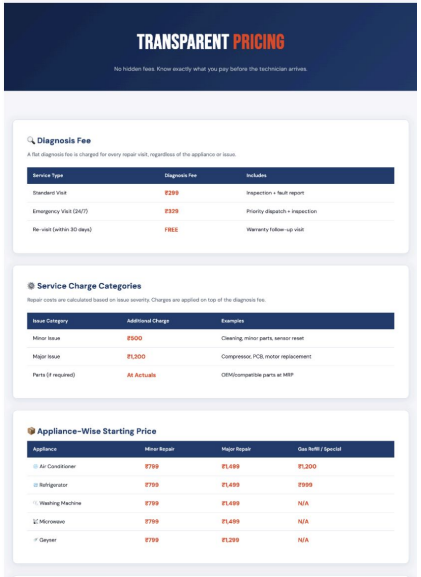
6

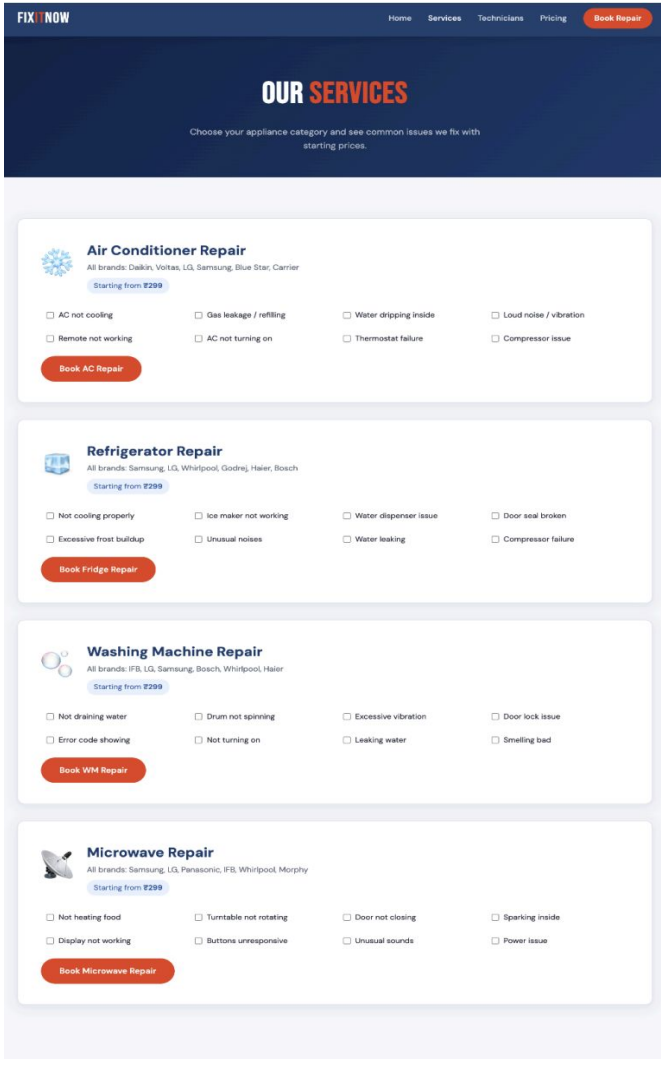
Booking confirmation is displayed to the user.

SCREENSHOTS









Slide 5 — Conclusion

The FixItNow website successfully demonstrates a real-world service booking platform built using front-end web technologies.

Simple and user-friendly interface

Transparent pricing system

Online booking functionality

Dynamic cost estimation using JavaScript

Future improvements can include:

- Backend database integration
- Online payment system
- User login and service tracking
